

WMD

WARNING: THE WMD IS NOT YOUR DAD'S FISH.

The new 7S WMD defines the bullet movement for performance alternative Shortboard designs.

High performance rails, and a super thin swallow tail generate massive speed and thrust out of every bottom turn.

The WMD's entry rocker and tail exit are very flat allowing the rider to get in and set up early as well as generate speed quickly after spins and over vertical cutbacks. It's signature 3/4 length single concave enhances the easy rocker profile providing lift for more speed in any condition from knee high to overhead.

The WMD's single flyer swallow tail is combined with a spiral vee behind the front fins giving the board two major advantages: the drive of a thruster and the pivot and easy recovery of a wide twin fin.

Ride it as a thruster or a twinstar - with a little trailer fin! This board is all about going fast.

The WMD comes standard with FCS M3 or M5 Glassflex Series fins.

6'1"
