

SOFT SURFBOARDS

We have developed these boards to be the best soft surfboards on the market. Best in performance so people can learn to surf well on them and best as far as usage goes. Until now many of the soft surfboards on the market have been more like toys. Our goal is to set the standard.

We have adopted the 'board inside a board' principle that sees an EPS core with a wooden stringer shaped and glassed with epoxy resin. Then it is wrapped in materials that make the board soft. This principle ensures that you get the best of both worlds. Firstly, a board that will perform really well as we can control the shape of the board and therefore the function and secondly we can make the board as soft as it needs to be to still perform well. All boards are constructed with a vacuum bagged and gluing process for added durability.

ALL BOARDS AVAILABLE IN LIME, WHITE OR BLUE
