

STAND UP PADDLE

9'0" SUP This is the highest performer in the range, suited to conditions 3ft and over, right up to 8-10ft. The template is narrow in the nose, like a conventional shortboard, with a single flyer tail template, which narrows the tail width and provides a pivot point right under your feet. The rails are also just a blown-up version of a performance shortboard rail, giving maximum control. Strictly for the advanced rider from 60-90kg.

9'6" SUP A perfect all-rounder, suited to beginners under 90kg, and intermediate/ advanced riders under 110kg. The 9'6" has a fuller 'fish' style template, with width in the nose and tail with fuller rails. This give maximum buoyancy and control while paddling without compromising performance when you get going. The double flyer tail design brings the template in where your feet pivot the board, for easy rail to rail surfing. Best suited to waves from 2 to 6-8 ft.

10'0" SUP This is the work-horse of the range, able to handle beginners up to 100kg, and advanced riders up to 120kg. This board has plenty of flotation, but still rips once you're moving. The template and rails borrow heavily from our successful 'Carver Fish' model, and the rocker profile is very progressive. The twin-flyer tail template brings in the tail width for more response off the tail, while the straighter rail curve

allows for stable walking and extra trim speed. This is one for the bigger guy, looking for real performance. McTavish Paddle This paddle features a Carbon Shaft with Light weight composite blade and handle. Weighing just under 600 grams it is built for performance.
