

SUPER FISH EPOXY

We are offering the entire Super Fish range in our full Epoxy / wood technology. This Epoxy / wood construction has been developed over the past few years.

We have worked with the internal lay up of the boards to include a .6mm layer of wood veneer to enhance the performance of the board whilst still allowing the board to maintain some flex.

The outer shell is strong and will give you much more durability. This year we are introducing the 6'6" in the Epoxy range as well

The Super Fish is a phenomenon! It is owned and loved by thousands of surfers around the world. The secret to the success of the Super Fish is in its Design. The most obvious one is the step deck, this gives the board a huge buoyancy advantage but leaves the board with high performance rails.

6'3"
