

AF2 TURBO

Aloha

This high volume, versatile Shortboard is the perfect step-up from the AF1 PRO. Designed to suit a wide range of surfers, the AF2 TURBO retains all the characteristics of a high performance Shortboard, such as the refined plan shape, but features a slight increase to the dimensions and overall foam distribution to offer greater stability and forgiveness.

The graduating rocker through the nose and tail on the AF2 TURBO offers quick take-off acceleration and increased control while still maintaining enough bottom curve to perform in hollow waves. A deep single concave gives the speed and response you would expect from a board of this calibre.

Super fast yet still forgiving, the AF2 TURBO can be used in a variety of different conditions and should be regarded as the backbone to any quiver.
